How Ambien 5mg Works

It helps individuals **fall asleep within 15–30 minutes**, offering **6–8 hours of restful sleep**. Unlike many over-the-counter sleep aids, Ambien does not cause grogginess the next day when used as directed.

Recommended Dosage and Administration

The standard starting dose for most adults is **5mg before bedtime**. Ambien should be taken **only once per night**, on an empty stomach, and immediately before going to bed. Avoid taking it earlier in the evening or after consuming alcohol. Doctors may adjust the dosage based on the **patient's age, gender, or response to treatment**.
