What is Diazepam?

Diazepam belongs to a class of medications called **benzodiazepines**, which act on the brain and central nervous system to produce a calming effect. It works by enhancing the effects of a neurotransmitter called gamma-aminobutyric acid (GABA), which helps reduce excessive nerve activity, promoting relaxation and alleviating anxiety.

Diazepam is commonly prescribed for:

- Anxiety disorders
- Muscle spasms
- Seizures and epilepsy
- Alcohol withdrawal symptoms
- Preoperative sedation

Its versatility and effectiveness have made Diazepam one of the most trusted medications for managing mental and physical tension.
